

The 'if' statements

- Braces `{ }` do not need to be added if there is only one statement.

if-else statement

- If = true, then do this
If = false, then do that.
- With 'else if' statements, once a condition is satisfied, the remaining are not evaluated.

Switch Statement

- You can print a string by using an `out` function.

eg `int = 8`.

String (month string)

```
month string = "January";  
break; . . . . .
```

This will print out the 8th case.

Break; while using switch, the "break" ends each case statement. If you do not put 'break' then each statement after will also be printed.
